Web Developers Needed! Help Us Redesign VA's Main Blog - VAntage Point.

VIRTUAL STUDENT FEDERAL SERVICE

Project Title	Web Developers Needed! Help Us Redesign VA's Main Blog - VAntage Point.
Project Summary	We are looking for WordPress web developers to help us pick a new theme, and build a mockup for a redesign of VAntage Point; VA's main blog, which averages more than 400k pageviews each month. It has been in its current form for about 3 years and is due for an upgrade.
Country	United States

Project Description

The Department of Veterans Affairs is one of the largest government agencies in the United States, so redesigning its main blog is kind of a big deal. You could be a part of that redesign. During this internship, you will search through the available themes at https://themeforest.net/ to find one that meets our needs. You will then build a mockup of the VAntage Point website using that theme and customize it as necessary. Additionally, you will review our latest Usability Audit Review and incorporate some of the recommended changes in navigation (i.e. header / footer) and page layout, etc.

Required Skills or Interests

Skill(s)
Coding
Website design

Additional Information

Ideally, we are looking for people with experience developing WordPress sites, but general web development knowledge (i.e. HTML / CSS) will be sufficient to participate in this project. Also, the ability to manage a hosting server would be a plus (going to need you to set up a server and install WordPress on it). Feel free to visit our blog (https://www.blogs.va.gov/VAntage/) to get a feel for what you will be working on. Maybe you can start poking through themeforest and finding themes that you think would fit the bill.

This will be a fun project to work on, and probably won't look half bad on your resume either. Might even qualify for use as a capstone or other school project. We look forward to working with you on this redesign!
